A screenshot of the Twonky MEDIA configuration web interface. The page title is "Twonky MEDIA Version 4.2.1" and the sub-header is "Twonky/Media Configuration: Sharing". The interface includes a left sidebar with navigation links for "Basic Setup" (Fast share, Sharing, Clients/Security, Internet Radio) and "Advanced Setup" (External applications, Names, Music tree, Video tree, Network, Miscellaneous). The main content area has buttons for "Save Changes", "Cancel", and "Rescan content directories". A red-bordered box highlights the "Content Locations" section, which contains three rows: "/Jmultimedia" with "All content types" and a "Browse" button; "/Jdownload" with "All content types" and a "Browse" button; and an empty row with "All content types" and a "Browse" button. Below this is an "Add new content directory" button. A note states: "Please note that some of the applied changes will only become effective after a server restarts!". The "Rescan in minutes:" field is set to "120". A final note explains: "This option specifies the rescan behavior of the server. If set to 0, automatic rescans are disabled. A positive value specifies the period between rescans of content directories in minutes. -1 enables the server to watch content directories automatically for new content without the need for rescans."
